

ADVENTURES IN
PROGRAMMING...

CUNEIFORM

[http://www.etoyoc.com/yoda/papers/
tc12019.Cuneiform_Slides.pdf](http://www.etoyoc.com/yoda/papers/tc12019.Cuneiform_Slides.pdf)

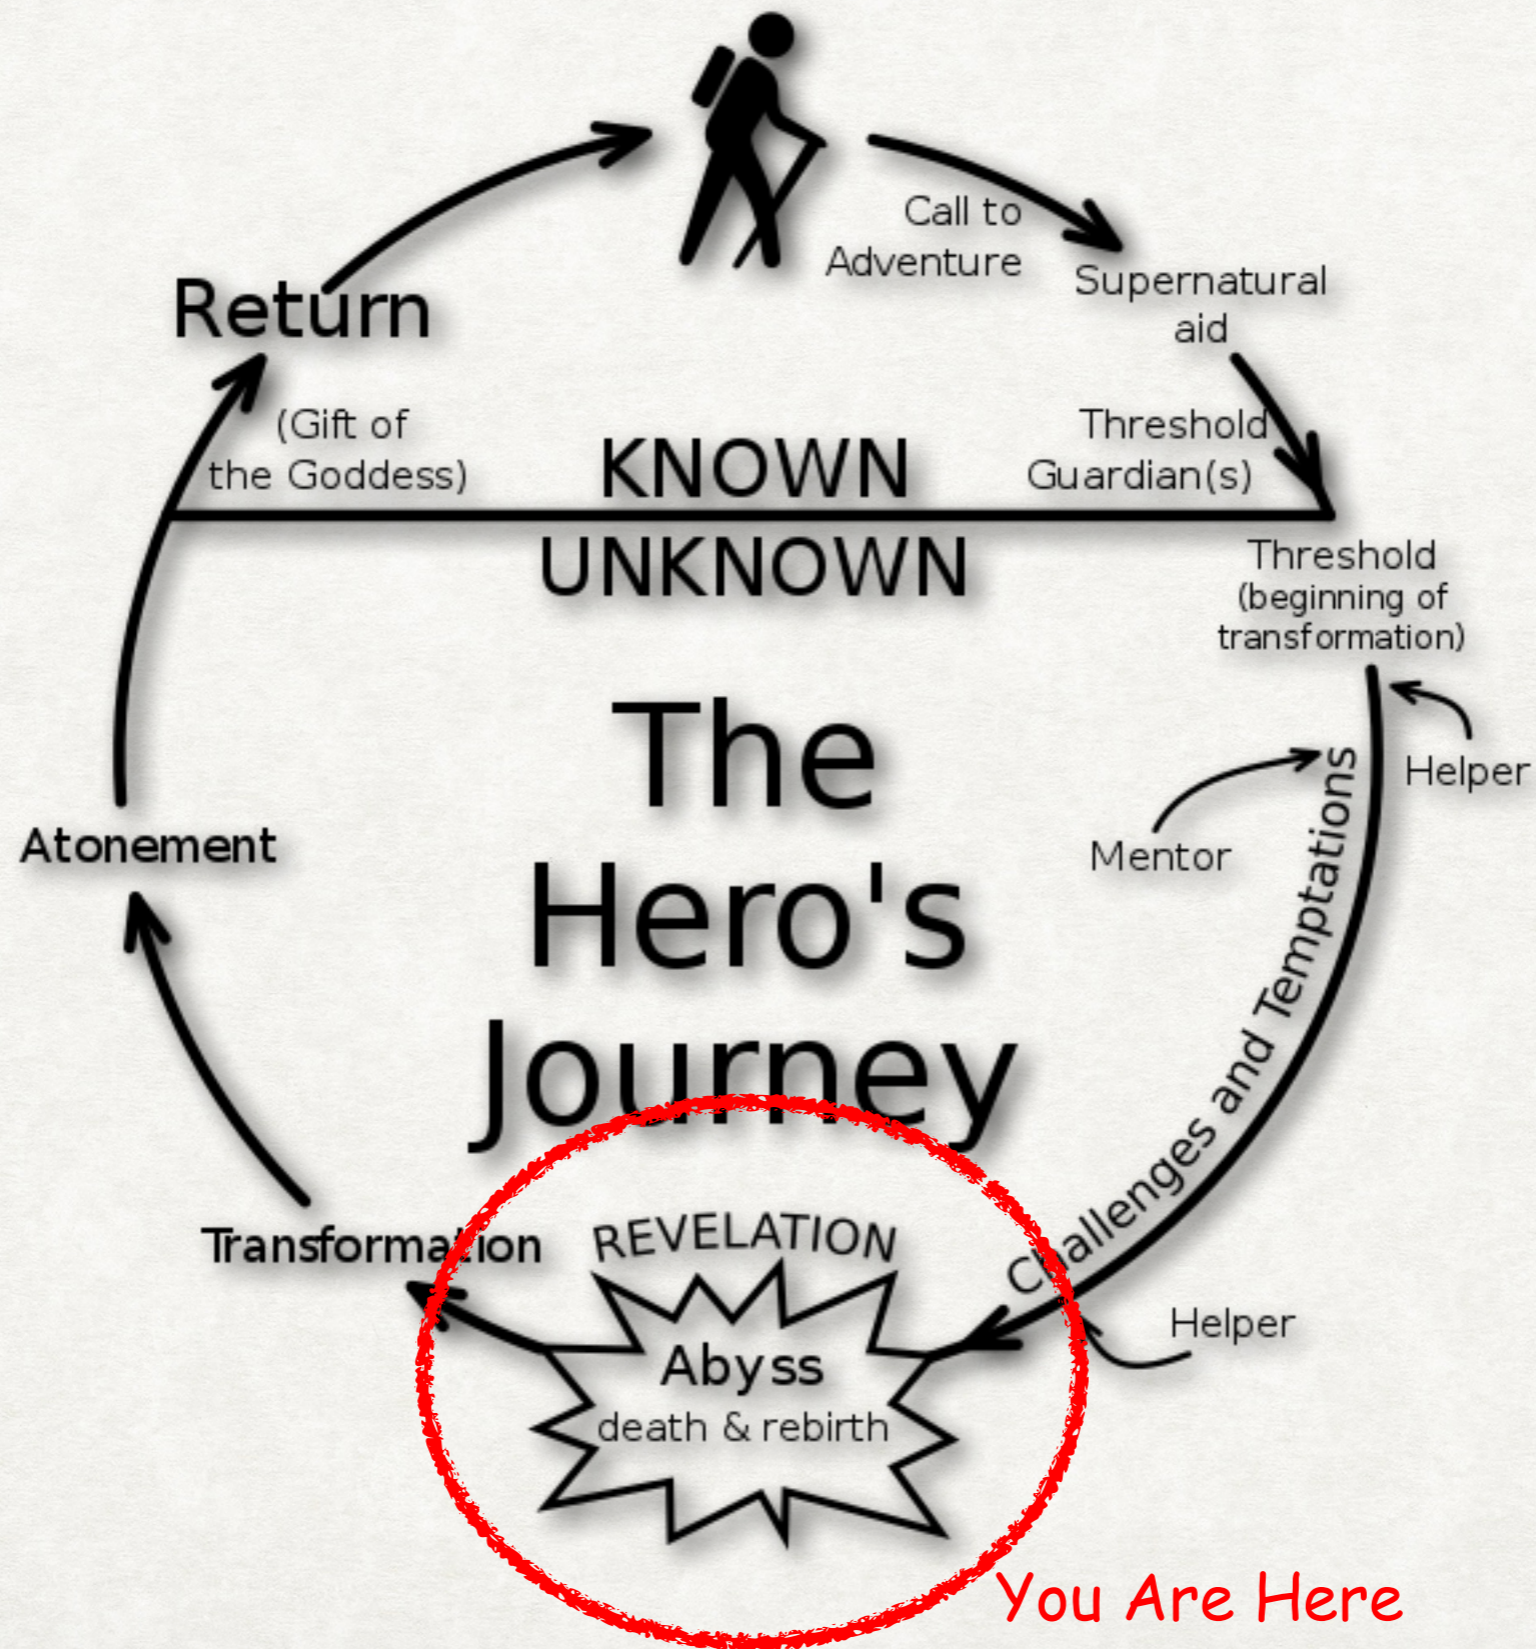

PRELUDE

- Cuneiform stated in the ashes of another project: a Text Adventure Engine
- Targeted the Tk Text Widget
- Display and command engine was working...
- ...Just as Apple managed to do it's yearly "Let's destroy Tk" campaign

CONTENT IS KING

- Content is the most expensive part of a product
- Content require man-years of work to produce
- Entire generates of quirks are introduced to display engines, just to keep from having to re-generate content
- At that point the question was: Is Tk worth spending man-years of work developing content for
- TL/DR: NO

CUNEIFORM

- A notation to allow content developers to target multiple display engines
 - Including the ultimate display engine: Print
- Utilizes Tcl as an expression engine
- Implements a Document Object Module using TclOO
- Written in Clay

CUNEIFORM FUNDAMENTALS

YOU FOOL, THIS ISN'T EVEN MY FINAL
FORM!

LAST MINUTE FULFILLMENT

- Cuneiform defers content generation until immediately before fulfillment
- Content writers compose in Tcl Script
- The output is HTML, Tk, and SVG
- Tcl Script informs the display engine of the content writer's intent
- The Display Engine sorts out the details and final layout

PROGRESS

- While the Game has yet to be written, the display engine supports several projects at T&E
- The major application is converting Sqlite databases to produce printed ship documentation and live views of damage control measures

SHIPBOARD DAMAGE CONTROL

- Navies maintain paper documentation for use "In case of emergency"
- Laminated instructions for procedures to perform for a variety of calamities
- IRM is useful for generating this documentation because all of the details for key systems are already encoded in the database

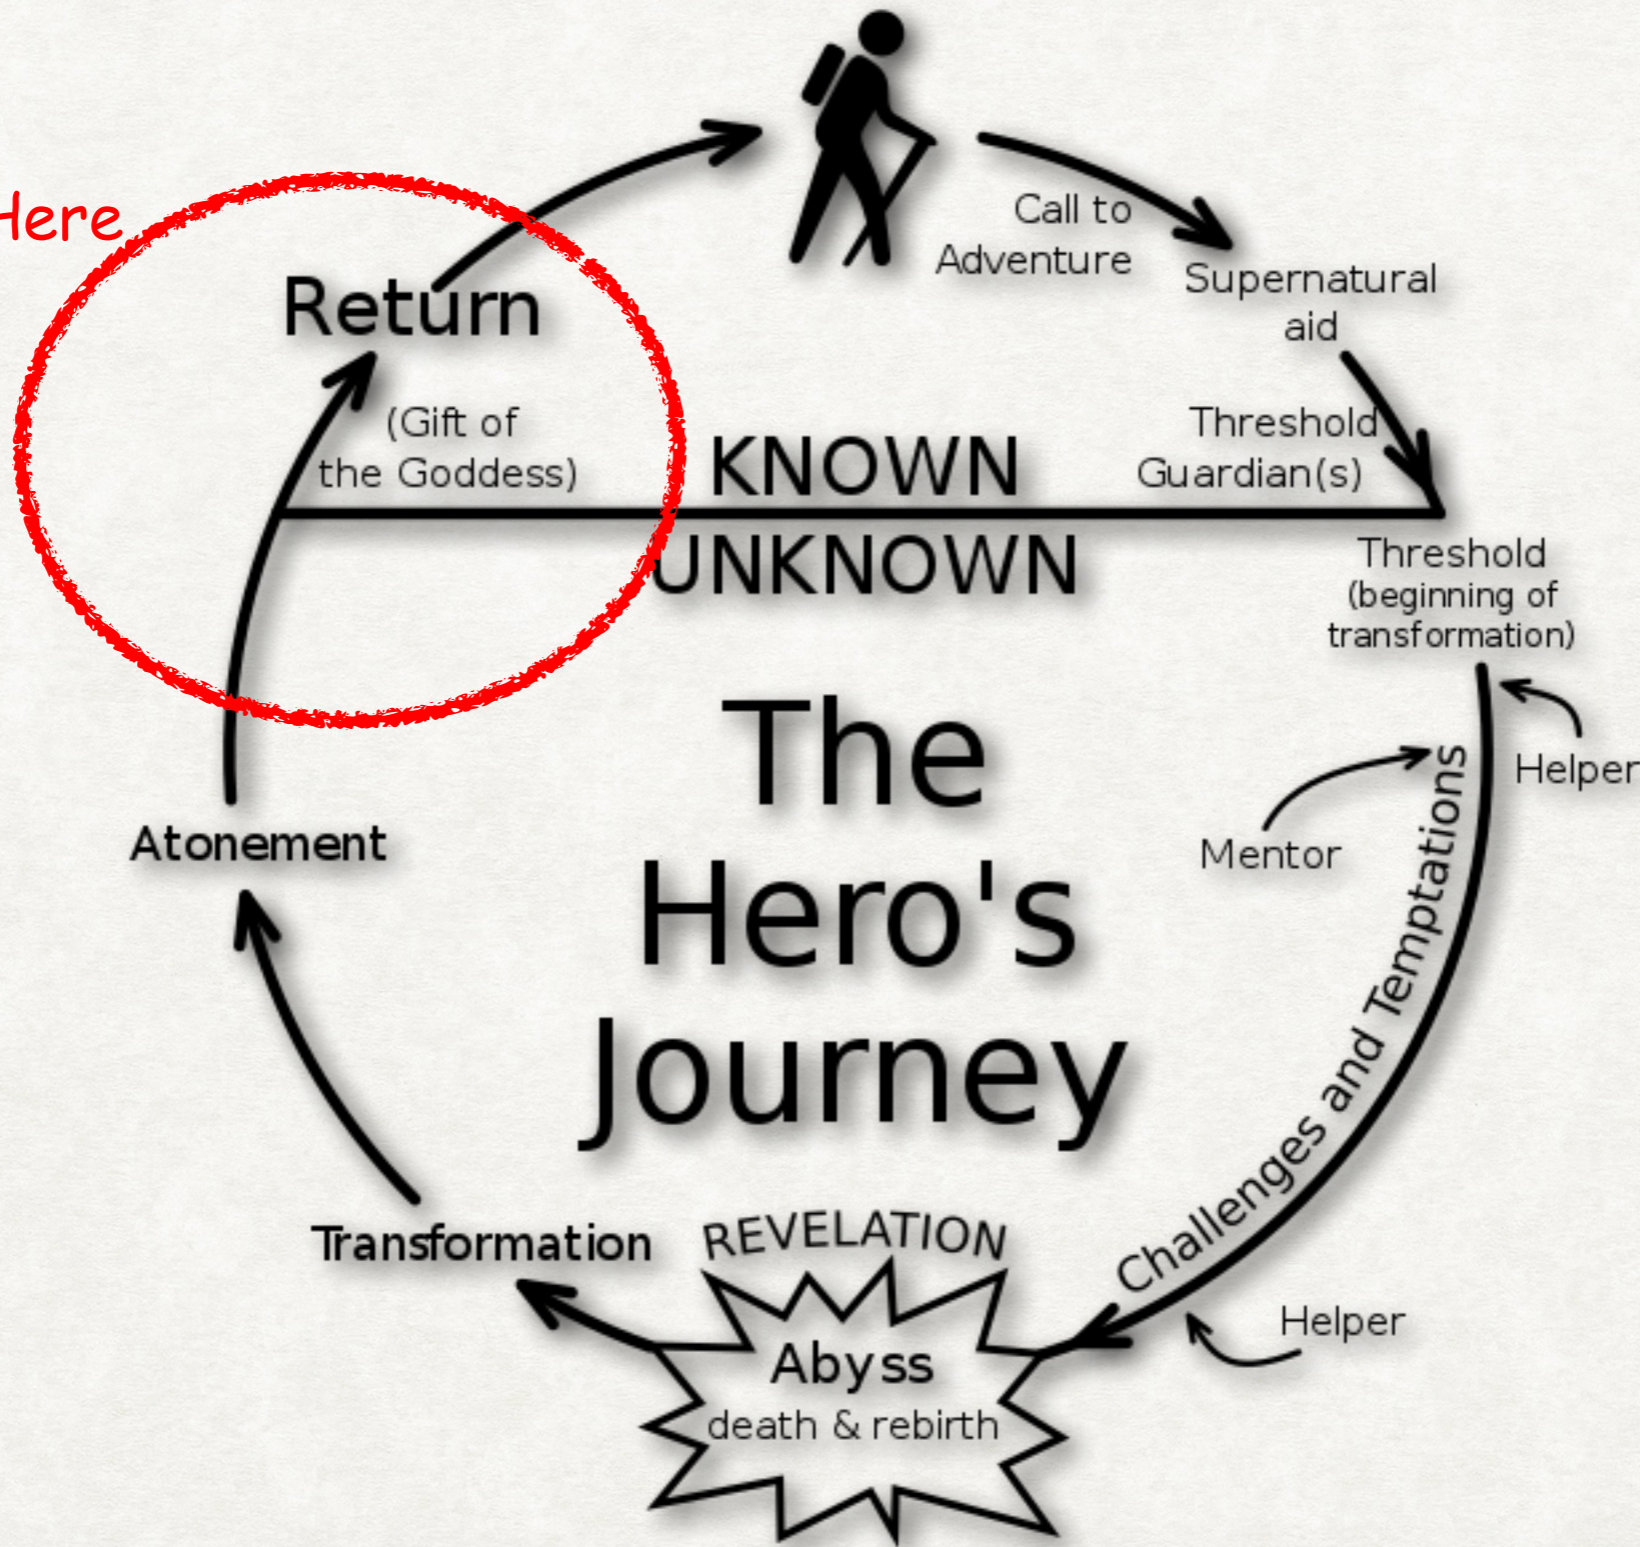

PDF OUTPUT

- For the US Navy, the first version output to PDF
- We had a request to perform similar work for the Republic of Korea Navy (The South Koreans)
- They needed their documentation in Hangul

HTML OUTPUT

- We needed an output that could print...
- ...and quickly...

Headline: Story Crafting
Date: Saturday, July 27, 2019
Posted By: [Plaid Hatter Games](#)

I've spent the last few weeks learning the finer arts of [Psychology](#), [Story Telling](#), and [Naval History](#) from YouTube. Feel free to judge me.

On one hand, time I could have spent on story lines was spent listening to talking heads talk about craft. On the other, those hours learning the craft have saved me man years of effort re-learning what they learned the hard way.

The point here is that activity is not progress. I know I can write. I know I can write a lot in a short amount of time. (At least if this blog is any evidence.) If I could monetize writing the first three chapters of a book, I'd be rich. I have had many a brilliant idea devolve into a degenerate mess. This time around, I knew I had to do something different. I had to actually learn, not just do.

This project has all of the problems of a complete science fiction/fantasy novel multiplied by the demands of an interactive story telling system. What I don't want to have happen is for the game to devolve into a procedurally generated mess. A pure sandbox never gets beyond "here is a procedurally generated dungeon/puzzle/scavenger hunt. Defeat the boss at the end/solve the puzzle/find the quest items. And you'll get XP and some loot."

While I love Skyrim and Fallout 4, the problem I have is that the player character is really the only person with any agency. Sure, there are 4 endings, but all you end up doing is picking a side in a conflict. There is no option to avoid the conflict, or negotiate an uneasy peace.

And with that in mind, I'm committing early on to injecting OPCs into my game. NPCs, as you know, are Non-Player Characters. They are generally passive, and built into the events of the story. OPCs stand for "Other Player Characters." They are AIs in the game that are competing with the player, have all of the same abilities as the player, as well as all of the same opportunities for growth and development as the player.

In [The Epic of Gilgamesh](#), I was hoping to create competing demigods to the player's character, running their own city-states. The show stopping problem in Gilgamesh was mainly that I didn't want to sit down and commit to an overall story. With no overall story, there is no real opportunity for opposition. Rivalry, sure. But opposition requires something concrete that two characters are struggling against each other to secure. My hope was that having Gods randomly generate quests I could keep the game interesting. But then I ran headlong into the fact that computers are not very creative on their own, and mad-lib stories stop being fun after the third or so.

USING CUNEIFORM

PUBLICATION CYCLE

- Author edits files as a local text file
- File is tagged with a UUID, and saved in a local copy of the website
- File system is synchronized via Rsync
- Thread on the server:
 - detects the new or modified file
 - Scans headers, indexes data in Sqlite
- Webserver produces final format on demand

USING CUNEIFORM COMPLEX LAYOUT

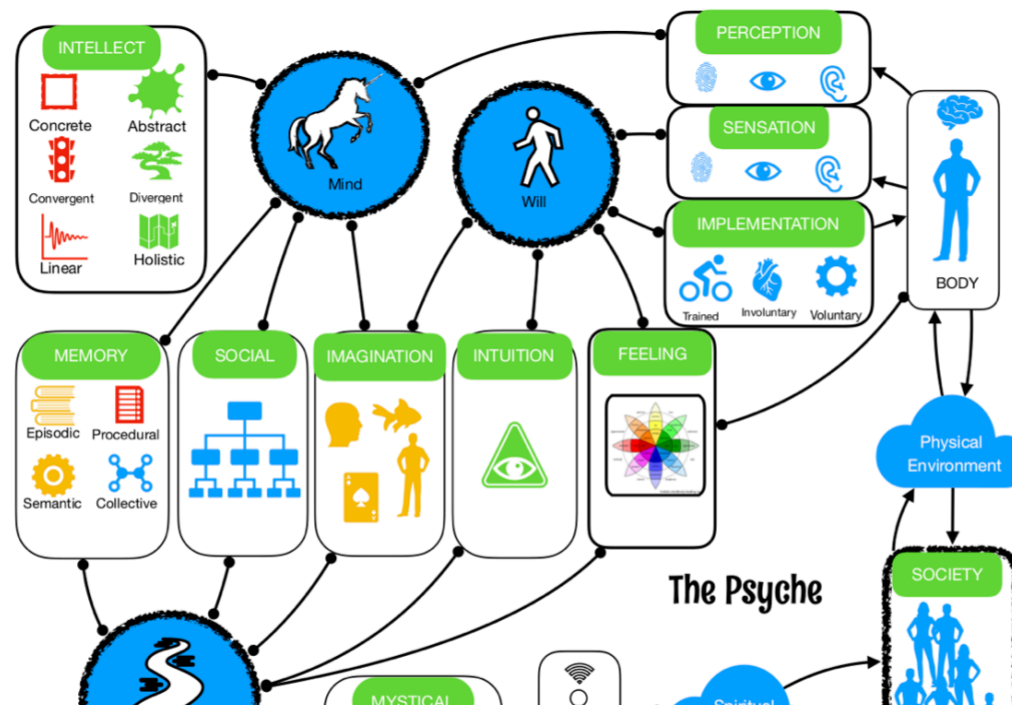

Cataloguing Existing Paranormal Phenomina

Supernatural ability stems from being able to connect the three worlds in ways that are surpass the usual miracle that is the Natural world. I had prepared a list of recognized abilities, but was is quite long, so I've pushed them to another page: [Here](#)

I have classified each special ability into one of 5 categories:

- Channeling - Connecting two souls across the spiritual world.
- Healing - Manifesting idealized patterns on living tissue to repair injury or cure disease
- Intuition - Gaining information from supernatural sources
- Kinesis - Imparting supernatural energy on physical objects
- Projection - Connecting two locations in the physical world via the the spiritual world.
- Transmutation - Supernatural transformation of physical matter

If we compare what is described to my map of the Psyche... there are a few problems.
